

Building Maintenance Work Option Program

The Building Maintenance Work Option program emphasizes “hands on learning”. We review safe and environmentally friendly cleaning practices while maintaining the Options premises. This includes surface cleaning, disinfecting, removal of refuse, recycling and compost and floor cleaning.

WHMIS and Joint Occupational Health and Safety issues are taught and practiced. Participants learn safe work practices including back care and personal protective equipment. There is a customer service component built into the program as clients will be dealing with the public as well as other employees and employers.
